A -CALCULATIONS

1.0 SUBJECT AND REFERENCES

The purpose of this analysis is to evaluate the structural capacity of the existing water tank located at 9870 Hightower Road, Roswell, GA 30075 for the additions proposed by T-Mobile.

The structural analysis is based on the following information:

Proposed antenna and equipment information provided by T-Mobile.

1.1 STRUCTURE

The 490,000 gallon tank is elevated by (8) braced legs. The overall height of the tank is 155 feet above the ground line (AGL). The tank diameter is approximately 50 feet and the reservoir is approximately 50 feet high. There are (42) existing antennas attached to the handrails and legs.

2.0 PROPOSED ADDITIONS

T-Mobile proposed configuration is as following:

RAD CENTER (FT) CARRIER	ANTENNA, RRU, TMA & OVP	MOUNT	FEED LINES
138	(6) RFS – APX17DWV	(9) Existing Railing Pipe	
T-Mobile	(3) RFS – APXV18	Mounts	
	*(3) Nokia – FXFB		(12) 1-5/8"
	*(3) Nokia – FRIG		Coax Cables
	*(3) RFS – ATMAA1412D		+
138	(3) Nokia – ASU9338TYP01	Vertical Members of	(3) Hybrid
T-Mobile		Existing Handrail	Cables
		(Adjacent to Existing	
		Pipe Mounts)	

^{*}RRUs and TMAs to be placed behind the antennas to minimize the wind loads

3.0 CODES AND LOADING

The analysis and design is in accordance with:

- IBC 2006 with 2010 Georgia Amendments.
- ASCE 7-05, Minimum Design Loads for Building and Other Structures.
- AISC 360-05

The following load parameters were applied:

- V=90 mph, Exposure C, I=1.15
- Ss=0.25 g, S_1 =0.09 g, I=1.5
- L=200 lbs, point load (on handrail)
- L=50 plf, distributed load (on handrail)

4.0 STANDARD CONDITIONS FOR ENGINEERING SERVICES ON EXISTING STRUCTURES

The analysis is based on the information provided to Compass and is assumed to be current and correct. Unless otherwise noted, the structure and the foundation system are assumed to be in good condition, free of defects and can achieve theoretical strength.

It is assumed that the structure has been maintained and shall be maintained during its service. The superstructure and the foundation system are assumed to be designed with proper engineering practice and fabricated, constructed and erected in accordance with the design documents. Compass will accept no liability which may arise due to any existing deficiency in design, material, fabrication, erection, construction, etc. or lack of maintenance.

The analysis results presented in this report are only applicable for the previously mentioned existing and proposed additions and alterations. Any deviation of the proposed equipment and placement, etc., will require Compass to generate an additional structural analysis.

5.0 ANALYSIS AND ASSUMPTIONS

The structure is considered to have adequate strength for the proposed loading, if the existing structural members used to support the proposed equipment are structurally adequate per the current code criteria or the additions or alterations to the existing structure do not increase the force in any structural element by more than 5%.

6.0 RESULTS AND CONCLUSION

<u>Water Tank:</u> The existing water tank is found to have **adequate** structural capacity for the proposed additions by T-Mobile. Utilizing a conservative approach, seismic shear and moment are calculated to be 1.56 and 1.45 times larger than the wind shear and moment respectively, thus tank structural design is governed by the seismic loads. The combined mass of existing equipment and T-Mobile additions is approximately 0.352% of the tank mass, less than 5%. Therefore, further analysis of the tank is not required per Section 3403.2 of the 2006 IBC and the structure is considered to have adequate capacity.

<u>Antenna Mount:</u> The existing handrail does not have adequate structural capacity for the proposed additions by T-Mobile. Each antenna mount should have (2) railing connections, (1) at the top member of the handrail and (1) at the toe plate.

Therefore, the additions proposed by T-Mobile can be implemented as intended, once the railing mounts are modified, within the conditions outlined in this report.

Should you have any questions about this report, please contact Ahmet Colakoglu at (856) 313-7183 or acolakoglu@compassts.com.

Sincerely, For Compass Technology Services, 9-12-12

3. Determine Governing Load

$$\frac{F_{\text{wind}}}{F_{\text{seismic}}} = 64.\%$$

====>>>

SEISMIC SHEAR AND MOMENT GOVERN THE DESIGN

$$\frac{M_{\text{wind}}}{M_{\text{seismic}}} = 69.\%$$

4. Compare Proposed Loads with Existing Tank

 $W_{additional} := PropAntenna1_{Weight} \cdot NumberOfPropAntenna1 ...$

 $= 11.428 \cdot kip$

- + PropAntenna2_{Weight}· NumberOfPropAntenna2 ...
- $+\ PropTMA1_{Weight}\cdot NumberOfPropTMA1\ ...$
- + PropRRU1_{Weight}·NumberOfPropRRU1 ...
- $+\ PropRRU2_{Weight} \cdot NumberOfPropRRU2 + PropOVP1_{Weight} \cdot NumberOfPropOVP1 \ ...$
- $+\ PropCable 1_{Weight} \cdot NumberOfPropCable 1\ ...$
- + ExistAntenna1 Weight · NumberOfExistAntenna1 ...
- + ExistMount1_{Weight}· NumberOfExistMount1 + ExistCable1_{Weight}· NumberOfExistCable1

Compare the original tank's seismic load to the proposed tank's seismic load

 $F_{seismicwproposed additions} := LF_{Seismic} \cdot C_s \cdot \left(Tank_Weight + W_{additional} \right) = 201.707 \cdot kip$

 $M_{seismic wproposed additions} := LF_{Seismic} \cdot F_{seismic wproposed additions} \cdot Tank Elevation_{Midpoint AGL} = 19767 \cdot kip \cdot ft$

 $F_{additional} \coloneqq F_{seismic wproposed additions} - F_{seismic} = 0.708 \cdot kip$

 $M_{additional} := M_{seismicwproposedadditions} - M_{seismic} = 69.344 \cdot kip \cdot ft$

$$\frac{F_{additional}}{F_{seismic}} = 0.352 \cdot \%$$

$$\frac{M_{additional}}{M_{seismic}} = 0.352 \cdot \%$$

< 10% ==> Further analysis not required

The total mass, with the existing and proposed equipment, is increased by less than 10%, thus lateral seismic load and gravity load increase is less than 10%. Further analysis is not required, per section 3403.2.3.1 of IBC 2006.

Date: 9/12/2012 11:02 AM

Point Load Capacity Check for Handrail

Mounts A1, A3, B1, B3, C1 and C3 have one handrail connection at the top handrail member. Mounts A2, B2 and C3 have (2) handrail connections, (1) at the top handrail member and (1) at the toe plate. The COVPs should be mounted on the vertical member of the handrail.

Existing antenna mount 1& 3 configuration
